EXTRACT-OSS

- A more potent version can be obtained from a 75/25 mineralized/demineralized formulation. The 25% demineralized freeze-dried bone allograft (DFDBA) allows for faster release of BMPs from within the graft while maintaining dimensional ridge stability owing to its 75% composition of mineralized freeze-dried bone allograft (FDBA).

PERIO-OSS

- This graft is composed entirely of 100% pure demineralized freeze-dried bone allograft (DFDBA). This favors faster regeneration of the periodontal ligament, with cementum and bone regeneration attached via Sharpey's fibers.

GBR-OSS

- GBR-Oss is a graft specifically designed for guided bone regeneration (GBR). It combines 25% non-resorbable bone allograft (NRBA) with 75% mineralized allograft, including 25% DFDBA to enhance osteoinductivity and support faster BMP release while maintaining ridge stability.

SINUS-OSS

- Sinus-Oss is a graft specifically designed for sinus grafting. It combines 50% non-resorbable bone allograft (NRBA) for long-term volume maintenance with 50% standard allograft, including DFDBA, to enhance osteoinductivity and BMP release.

CONTOUR-OSS

- Contour-Oss is specifically designed for contour augmentation or "veneer" grafting. It combines 75% non-resorbable bone allograft (NRBA) for long-term volume stability with 25% DFDBA to enhance BMP release and new bone formation.
